Admitted Subacute
Admitted Subacute - National

2013-14 & 2014-15

Classification
• Australian National Subacute & Non-acute Patient Classification (AN-SNAP) v3.0

Specification
• Admitted Patient Care National Minimum Dataset Specification & IHPA Subacute Palliative specifications 2013-14 / 2014-15

Source
• Victorian Admitted Episodes Dataset
Key changes

• 2014-15 is the last year where the Commonwealth contribution to episodes will be paid at a care type level if no SNAP items are submitted (e.g. FIM, RUG-ADL)

• IHPA are proposing that RUG-ADL scores are required to be provided at an individual item level in 2014-15

• 2014-15 VAED specifications are not compliant – Victoria does not support provision of individual scores when there is no need for classification purposes.
Admitted Subacute - National

AN-SNAP v3

Key data elements
- Care type
- Impairment / Phase of Care
- FIM/RUG-ADL score
- Age / Length of Stay
  - Combination = AN-SNAP group = Price weight

Other key data elements
- Indigenous status
- Location (post code)
- Age (paediatric subacute loading)
- Account class
  - Price weight x loadings = Cmwhth $
The IHPA are currently developing AN-SNAP v4 and is due to be completed by November 2014, prior to the release of the draft National Efficient Price Determination for 2015-16.

The department will assess the suitability of implementing AN-SNAP v4 following its release by March 2015.

iSNAC

In 2013-14 the Department implemented the interim Subacute and Non-Acute Classification (iSNAC) for admitted subacute which:

- Included the development of 17 weighted bed day classes that broadly align with AN-SNAP classes:
- Enabled familiarisation with the new classification and activity data requirements

In 2014-15, the Department will continue with iSNAC.

Further advice regarding price weights will be communicated in the subacute forums in May 2014.
